SUMMARY

Computer Science Engineering undergraduate pursuing a B.Tech degree with hands-on experience in Java, Kotlin, Python, backend development, Android development, REST APIs, SQL, Git, and artificial intelligence. Comfortable working in Agile/Scrum teams, with exposure to CI/CD pipelines and Docker. Familiar with Android Studio, Visual Studio Code, Figma, and GitHub.

EDUCATION

Dr. D. Y. Patil School of Science and Technology

Pune, Maharashtra
2024 to 2028

– Bachelor of Technology in Computer Science Engineering
– Currently pursuing 3rd year of undergraduate studies.

PROJECTS

AI Sales Calling System

GitHub

- Developed an AI-powered sales calling workflow for customer outreach, lead qualification, callback scheduling, and WhatsApp follow-ups.
- Built backend workflows using FastAPI, REST APIs, and OpenAPI, with a **SQL**-integrated PocketBase database for lead and call data.
- Managed the codebase with **Git** within an **Agile** workflow and set up a **CI/CD** pipeline for automated testing and deployment.
- Sent real-time WhatsApp messages mid-call using the **UltraMsg API**, tunneled through an **ngrok URL** to enable live webhook connectivity during active calls.
- Automatically compiled and shared a complete requirements chart with the customer over WhatsApp once the call ended, summarizing everything discussed during the conversation.

– **Technologies:** Python, FastAPI, PocketBase, OpenAPI, SQL, Git, UltraMsg, ngrok, AI APIs

TransitOps | Fleet Management and Logistics Platform

GitHub

- Developed a unified fleet operations platform covering vehicle management, driver compliance, trip dispatching, maintenance, expenses, telemetry, analytics, and reporting.
- Built an asynchronous FastAPI backend integrated with a **SQL**-based database and a responsive Next.js frontend using TypeScript and Tailwind CSS.
- Implemented RBAC, dispatch lifecycle management, maintenance workflows, vehicle ROI analytics, CSV reporting, and GPS telemetry.
  Integrated Gemini 2.5 for fleet assistance and AI-based vehicle document data extraction.
  Managed version control with **Git** under an **Agile/Scrum** workflow, and containerized the app with **Docker** behinda **CI/CD** pipelineforautomatedtestingandbuilds.

– **Technologies:** FastAPI, Python, Next.js, React, TypeScript, Tailwind CSS, PocketBase, SQL, Git, Gemini 2.5

QR Scanner Application

GitHub

- Developed an Android application for fast QR code detection and processing using the device camera.
- Designed a lightweight scanning interface with simple navigation and responsive user interaction.
- Used **Git** forversioncontrolandapplied**Agile**sprintcyclestoplanandprioritizefeaturedevelopmentinAndroid Studio.

– **Technologies:** Kotlin, Android Studio, Android SDK, Git

SKILLS

Languag es: Java, Kotlin, Python, TypeScript, SQL

Backend & APIs: FastAPI, Flask, REST APIs, OpenAPI, PocketBase

Frontend: Next.js, React, Tailwind CSS

Tools & Practices: Git, GitHub, Docker, CI/CD, Agile/Scrum, Data Structures & Algorithms (DSA)

Platforms: Android Development, Android Studio, Visual Studio Code, Figma

ACHIEVEMENTS & CERTIFICATIONS

1st Rank, Inno Hack 2.0 — Dr. D. Y. Patil School of Science & Technology, Pune, 2025.

Bharatiya Antariksh Hackathon 2025 — Certificate of Acknowledgement for successful idea submission and par ticipation.
